

Model LOCK-02 & LOCK-05 Valve Handle Lockouts

Description

These new valve lockouts can be used to secure Multi Turn valves in either the open or closed position, when used with a customer supplied padlock. The lockout is constructed of a chemical and temperature resistant polypropylene and is supplied in a bright red color to convey warning. These lockouts are available in two sizes. LOCK-02 can be used to lock out many compressed gas cylinder valves, while LOCK-05 is intended for larger valves. These lockouts may help you comply with OSHA CFR1910.147.
